### **Clarification on Brexit, GDPR and Infogix SaaS Platform Deployments**

The current Infogix SaaS Data3Sixty Govern product hosts all application data on the Govern product in dedicated individual databases for Prod, Test, and Dev instances in defined Microsoft Azure regions in the EU.

Solely for Data3Sixty Govern, there is an encrypted limited-access community database which is hosted in the United States that holds tenant username (typically email address), first and last name, and application instance URLs. Infogix is currently researching approaches to segmenting the user login information to regional community databases.

To prepare for the uncertainty the impact of Brexit on regulatory conditions, Infogix has segmented the location of any non-UK EU customer to Ireland or Western Europe, while UK-based customers' instances are hosted from Microsoft Azure UK South or UK West and AWS London regions. Infogix will be splitting the elastic search nodes between Western Europe and London, UK in the first quarter of 2019.

Infogix SaaS Data3Sixty DQ+ and Analyze products, as well as SaaS Controls (Infogix Assure, Infogix ER, Infogix Perceive, and Infogix Insight) products for EU customers are hosted entirely in Dublin, Ireland.
